

Webkinz Cheat Tool

Contributed by

Alot of the rumored cheat codes for Webkinz World dont work very long at all. Cheat Engine is a program that allows you to discover your own cheats in almost any game. Including Webkinz World and Neopets to name a few. Programs such as this can seem complicated at first, but in this article I will walk you through how to use the program on games like Webkinz and NeoPets in no time.

Ok, before we get started we need to assure that you have downloaded what you need. First, get a hex editor for games such as CE for free. It is a small download. Once you have downloaded a hex editor,. I have noticed its much easier to get one working on particular browsers rather than others.

Now that you have downloaded and installed what you need you can open cheat engine and your browser. Now click on the button in the upper left corner, it has a computer screen with a magnifying glass over it. This will take you to the process list. From the process list select your web-browsers process (if you are using firefox with google toolbar it will be firefox.exe) and then click attach to process. Now go pick a game in Webkinz or Neopets and start playing.

First I will tell you how to do the easiest thing you can do with this tool, speed cheat. To do this, simply check the box that says "Enable Speedhack" and set the number low to make the game run ultra slow, or high to make it run fast. This alone will make you tons of money. For more complicated cheating, play for a while and get a little bit of a score, write down the number of your score. Then in CE type in your score, and in the dropdown list select Exact value, then click scan.

To the side a bunch of numbers will show in a list, now go back to your game and play some more to make your score go up, then in the dropdown list in CE select "Increased Value" and scan again. Continue this way until it narrows it down to 1 or 2 numbers in the list to the side. Once it has done that, select the numbers from the list to the side and edit them. They will show in the list on the bottom, change them to whatever value you would like your score to be. And there you have it, you have just found your own cheat! There are many other ways you can cheat on these games with this tool. I will let you find the rest out yourself, the possibilities are endless! Have fun and happy cheating!
